>> SYSTEM OVERRIDE: DEFINING PASSION <<

```
    "Just a kid trying to level up in life.
When your background, family, and financial constraints
    leave absolutely no room for surrender...
    Even if you don't have a specific 'passion',
the sheer refusal to give up BECOMES the passion itself."
```

```

README.md

Last updated: June 25, 2026

1. Project Description

This resume/portfolio document was crafted entirely using $\text{\LaTeX}$ source code. It demonstrates typesetting skills, structured layout configuration, and precise package implementation without the use of visual drag-and-drop editors.

2. System Requirements & Dependencies

To compile and render this project successfully, the following $\text{\LaTeX}$ environment configurations and packages are required:

- $\text{\TeX}$ Distribution: TeX Live (2020 or later), MiKTeX, or Overleaf (pdfLaTeX compiler).
- Core Packages:
 - `{ xcolor -- For system terminal color themes and styling.`
 - `{ hyperref -- For hyperlinking GitHub profiles and contact links.`
 - `{ qrcode -- For generating scannable portfolio links.`
 - `{ graphicx -- For handling external profile and project assets.`
- Font Configuration: Standard $\text{\LaTeX}$ typewriter fonts (`\texttt`) for visual terminal emulation.

3. Compilation Guide

1. Upload all project assets (`main.tex`, `Me.jpg`, `Idol.jpg`) to the root directory.
2. Set the primary compiler engine to pdfLaTeX.
3. Click Recompile. The output will be generated as a standardized document.
